KCA fast charger

KCA fast charger adopts advanced high frequency switching power supply technology, divides the charging procedure into three stages, I . e. constant current, constant voltage and floating charge, it can charge quickly with high efficiency. With small volume, light weight, full- automatic control and simple operating mode, it is very suitable for minitype motors or low charging power batteries of various voltage.

Application

Suitable to charge batteries of small electrical bike or low charging power batteries for any voltage type.

KGCA silicon controlled battery charger

KGCA silicon controlled battery charger adopts advanced synchronous phase control technology, it can test the voltage and current of battery and adopts current limit and constant voltage mode to proceed charging quickly, besides, the high power charger also includes charging timer. Its charging current and voltage limiting can be adjusted steplessly. Its high charging efficiency, high saturation ratio and strong charging power enable it to be suitable for large and middle scale batteries of various voltage and current.
