PCA intelligent charger

PCA charger is kind of advanced deep-cycle lead acid battery charger with high efficiency. PCA adopts microprocessor control, charges in five steps, it can control the charging process of different stages automatically according to battery state (voltage, temperature and so on), and the charging current and voltage accurately; assure that the charged battery reaches an optimum condition; PCA charger can be operated conveniently, has a friendly and direct viewing interface, can be connected with storage battery for a long time, and you need not worry about overcharging. PCA charger bears multi security features : over – high temperature protection, overload protection, no sparking during battery connection, reverse polarity protection and short circuit protection, etc. It is suitable for the batteries of fixed voltage.

Application

Suitable to charge batteries of fixed voltage.

HBD

fixed type step-up/down transformer

The fixed type step-up / down transformer is an ideal AC step-up/down power supply. It can step down the voltage from 220V to 110V or step up it from 110V to 220V effectively, with advantages of no waveform distortion , high efficiency, elegant appearance , ease of use , effective operation for a long term, etc. It is suitable for imported electrical appliances.
